Gross Domestic Product: Q3/2026

NR 218/2026 | National Accounts | Release Date: 26/11/2026 | Cut-off Date: 23/11/2026

Salient Points

- In 2026-Q3, Gross Domestic Product (GDP) rose by 5.0 per cent in volume terms.
- Domestic demand contributed positively to GDP growth in volume terms (6.5 percentage points).
- Foreign trade contributed negatively to GDP growth in volume terms (-1.5 percentage points).
- The GDP deflator rose by 2.5 per cent when compared to 2025-Q3.

Commentary

Provisional estimates indicate that the Gross Domestic Product (GDP) for the third quarter of 2026 amounted to €6.9 billion, registering an increase of €493.9 million, or 7.7 per cent, when compared to the same quarter of 2025. In volume terms, GDP rose by 5.0 per cent.

For the third quarter of 2026, the Gross Domestic Product (GDP) of the Maltese economy registered a positive year-on-year growth rate of 5.0 per cent in volume terms.

The GDP deflator went up by 2.5 per cent compared to the same quarter last year. This represents an increase of 0.5 percentage points in comparison to the year-on-year rate recorded in the second quarter of 2026.

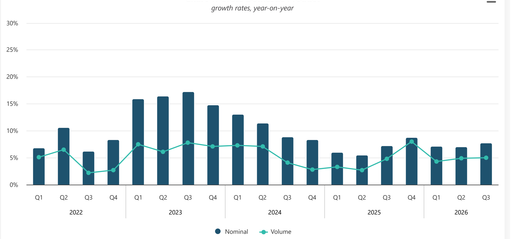
Chart 1. Gross Domestic Product

growth rates, year-on-year



The production approach

The production approach, also called the output approach, measures GDP as the sum of the Gross Value Added (GVA), which is the difference between the value of Output and the value of Intermediate consumption, and Taxes less subsidies on products.

During the third quarter of 2026, GVA rose by 5.6 per cent in volume terms, when compared to the corresponding quarter of 2025.

The contribution to the GVA growth rate in volume terms of Industry (NACE Sections B to F) and Service activities (NACE Sections G to U) was positive at 0.1 and 5.3 percentage points, respectively. Agriculture and fishing (NACE Section A) contributed positively by 0.2 percentage points.

The increase in Service activities was mainly driven by the growth rates recorded in the following sectors: Information and communication (10.1 per cent), Transportation and storage (13.4 per cent) and Accommodation and food service activities (9.9 per cent).

Table 2. Production, contributions to GDP growth in volume terms

		Q3 2025	Q4 2025	Q1 2026	Q2 2026	Q3 2026

Taxes less subsidies on products	pp	0.3	3.6	-0.3	0.0	-0.1

[1]Chain-linking for variables with a potentially changing sign is aggravated and the results could prove to be erratic. Specifically in such cases only the contribution to the GDP growth is computed.

Note: Contributions may not add up due to rounding.

The expenditure approach

The expenditure approach is another method used to calculate GDP and is derived by adding Final consumption expenditure, Gross capital formation and Exports less Imports.

Domestic demand had a positive contribution of 6.5 percentage points to the year-on-year GDP growth rate in volume terms. External demand registered a negative contribution of 1.5 percentage points.

In the third quarter of 2026, Final consumption expenditure witnessed an increase of 7.1 per cent in volume terms. This was the result of an increase in the expenditure of Households and General government final consumption expenditure of 5.9 and 11.6 per cent, respectively. The expenditure of NPISHs[2] increased by 0.3 per cent.

Gross fixed capital formation increased by 11.7 per cent in volume terms.

Exports and imports of goods and services in volume terms both rose by 3.0 and 4.9 per cent respectively.

[2] Non-profit institutions serving households.

Imports of goods and services	pp	-1.8	-0.6	0.4	6.2	5.4

Note: Contributions may not add up due to rounding.

The income approach

The third approach to measure economic activity is the income approach, which shows how GDP is distributed among compensation of employees, operating surplus of enterprises and taxes on production and imports net of subsidies.

Compared to the third quarter of 2025, the €493.9 million increase in nominal GDP was the result of a €278.5 million increase in compensation of employees, a €165.3 million rise in gross operating surplus and mixed income, and an increase of €50.1 million in taxes on production and imports less subsidies.

Table 4. Income, contributions to GDP growth in nominal terms

		Q3 2025	Q4 2025	Q1 2026	Q2 2026	Q3 2026
Compensation of employees	pp	3.5	2.0	4.5	4.5	4.3
Agriculture and fishing	pp	0.0	0.0	0.0	0.0	0.0
Industry	pp	0.3	0.4	0.4	0.4	0.4
Services	pp	3.2	1.6	4.1	4.0	3.9
Gross operating surplus and mixed income	pp	2.5	2.5	1.3	2.1	2.6
Taxes less subsidies on production	pp	1.1	4.2	1.2	0.4	0.8

Note: Contributions may not add up due to rounding.

Gross National Income (GNI)

GNI differs from GDP by incorporating net compensation of employees, net property income, and net taxes on production and imports receivable from abroad.

Considering the effects of income and taxation paid and received by residents to and from the rest of the world, GNI at market prices for the third quarter of 2026 was estimated at €6.2 billion.

[1] In year-on-year terms.
Chain-linking for variables with a potentially changing sign is aggravated and the results could prove to be erratic. Specifically in such cases only the contribution to the GDP growth is computed.

Methodological Notes

1. The chain-linked volume indices have been re-referenced to 2020=100 (Tables 6 and 8).

2. Data in this news release is unadjusted. Seasonally adjusted data is available in the table (namq_10_gdp) accessible here.

3. Data in this news release are in line with the European System of Accounts (ESA) 2010 manual (ISBN 978-92-79-31242-7). This system of accounts is mandatory for all EU Member States. The accounts are subject to audit by the European Court of Auditors and Eurostat's GNI Committee to ensure reliability, comparability and exhaustiveness.

4. Gross Domestic Product (GDP) is an estimate of the value of goods and services at market prices produced in the economy over a period of time. The GDP is estimated in nominal terms using the production approach, aggregating the output of the various productive sectors net of the cost of intermediate inputs. The expenditure approach is reconciled with the production approach both in nominal and volume terms. GDP in volume terms excludes the effects of price inflation on market prices. The income approach shows how GDP is distributed into compensation of employees, operating surplus of enterprises and taxes on production and imports net of subsidies.

5. Data in this news release should be considered as provisional for 2023 to date.

6. Data users must be aware that the industrial activities of General government are spread over 21 different NACE categories (at A88 division) and include local councils and extra-budgetary units that are financially dependent on the government. Public administration and defence; compulsory social security (NACE 84) is the largest category in terms of gross value added.

7. The ESA 2010 GNI Inventory provides a detailed explanation of sources and methods used for estimating GNI in Malta. It is the basis for the Eurostat assessment of the quality and exhaustiveness of GNI data and their compliance with ESA 2010 in the context of the GNI for own resources purposes. The Inventory is a reference document that is kept up-to-date to reflect the latest methodology in place.
