

17 November 2021 | 1100 hrs | 209/2021

Harmonised Index of Consumer Prices (HICP): October 2021

1. Main points

- In October 2021, the annual rate of inflation as measured by the HICP was 1.4 per cent, up from 0.7 per cent in September 2021 (Table 2).
- The 12-month moving average rate for October stood at 0.3 per cent (Table 2).
- The largest upward impact on annual inflation was measured in the Food and non-alcoholic beverages Index (+0.53 percentage points), while the largest downward impact was recorded in the Restaurants and hotels Index (-0.38 percentage points) (Chart 2).

Chart 1. Inflation rates

Details on the compilation of the HICP in the context of COVID-19 are available in the methodological notes.

2. Overview

The HICP measures monthly price changes in the cost of purchasing a representative basket of consumer goods and services. The HICP is calculated according to rules specified in a series of European Union (EU) regulations that were developed by Eurostat in conjunction with the EU Member States. The HICP is used to compare inflation rates across the EU. A closely related measure of price movements is the Retail Price Index (RPI). A description of the differences between the HICP and the RPI can be found in Section 5.2 of this news release.

Each monthly HICP news release includes three different measures of inflation:

- i. The annual inflation rate measures average price changes between the reference month and the same month of the previous year. Although responsive to recent changes in price levels, this measure can be influenced by one-off effects in either month.
- ii. The monthly inflation rate compares price changes between the reference month and the previous month. This measure can be highly influenced by seasonal effects.
- iii. The 12-month moving average rate overcomes the volatility of the above two rates by comparing the average of the latest 12 indices to the average of the previous 12 indices. This measure is less sensitive to temporary changes in prices.

3. Price changes and effects on inflation

Table 1 shows that the highest annual inflation rates in October 2021 were recorded in Recreation and culture (4.6 per cent) and Clothing and footwear (3.2 per cent). On the other hand, the lowest annual inflation rates were registered in Communication (-2.1 per cent) and Alcoholic beverages and tobacco (0.1 per cent).

Table 1. HICP indices

Average 2015=100¹

Division	Weight	Indices			Annual rate (%)	Monthly rate (%)
		Oct 2020	Sep 2021	Oct 2021	Oct 2021	Oct 2021
Food and non-alcoholic beverages	181.13	113.45	116.81	116.88	3.0	0.1
Alcoholic beverages and tobacco	40.15	108.79	109.10	108.92	0.1	-0.2
Clothing and footwear	42.97	94.45	91.55	97.51	3.2	6.5
Housing, water, electricity, gas and other fuels	102.38	106.52	107.99	109.34	2.6	1.3
Furnishings, household equipment and routine household maintenance	88.15	106.72	108.40	109.07	2.2	0.6
Health	48.06	109.38	110.69	110.95	1.4	0.2
Transport	123.56	102.66	106.01	104.50	1.8	-1.4
Communication	38.97	96.53	95.00	94.45	-2.1	-0.6
Recreation and culture	77.84	100.00	102.43	104.61	4.6	2.1
Education	27.23	112.27	113.62	113.33	0.9	-0.3
Restaurants and hotels	144.52	113.52	123.33	115.83	2.0	-6.1
Miscellaneous goods and services	85.03	107.93	107.68	108.56	0.6	0.8
All-items	1,000.00	107.54	109.72	109.01	1.4	-0.7

¹ refer to Section 5.4

Chart 2 depicts the impacts on the annual inflation rate by the 12 main divisions. An impact is a measure showing the change in inflation as a result of the inclusion of an index. Such an impact takes into account both the weight and the annual rate of inflation by division.

In October 2021, the largest upward impact on annual inflation was registered in the Food and non-alcoholic beverages Index (+0.53 percentage points), largely due to higher prices of vegetables. The second and third largest impacts were measured in the Recreation and culture Index (+0.34 percentage points) and the Housing, water, electricity, gas and other fuels Index (+0.26 percentage points), mainly on account of higher prices of pet food and house maintenance services respectively (Chart 2).

The downward impacts on annual inflation were registered in the Restaurants and hotels Index (-0.38 percentage points) and the Communication Index (-0.07 percentage points), mainly reflecting a lower contribution from accommodation services and lower prices of mobile phone services respectively (Chart 2).

Chart 2. Contribution to the annual inflation rate by the 12 main divisions: October 2021

Note: A percentage point is the arithmetic difference between two percentages.

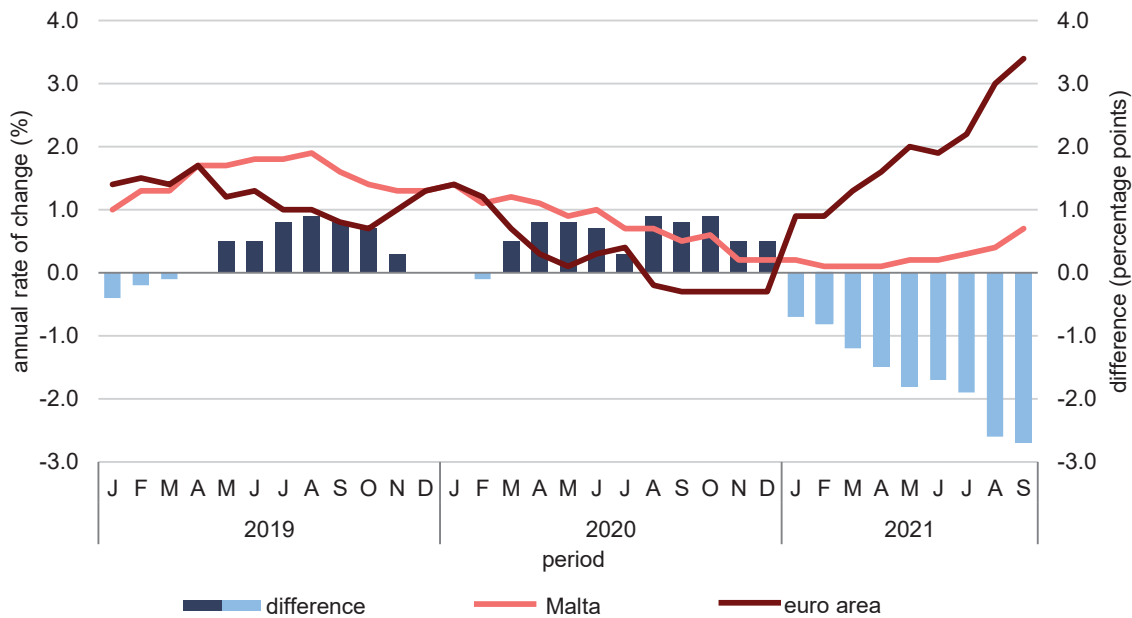

Table 2. Inflation rates by year and month

Month	2019		2020		2021	
	Annual rate (%)	12-month moving average rate (%)	Annual rate (%)	12-month moving average rate (%)	Annual rate (%)	12-month moving average rate (%)
January	1.0	1.7	1.4	1.6	0.2	0.7
February	1.3	1.7	1.1	1.5	0.1	0.6
March	1.3	1.7	1.2	1.5	0.1	0.5
April	1.7	1.7	1.1	1.5	0.1	0.4
May	1.7	1.7	0.9	1.4	0.2	0.4
June	1.8	1.7	1.0	1.3	0.2	0.3
July	1.8	1.7	0.7	1.2	0.3	0.3
August	1.9	1.7	0.7	1.1	0.4	0.2
September	1.6	1.6	0.5	1.0	0.7	0.3
October	1.4	1.5	0.6	1.0	1.4	0.3
November	1.3	1.5	0.2	0.9		
December	1.3	1.5	0.2	0.8		

4. HICP (Malta and euro area)

This section compares the Maltese HICP with the euro area counterpart for the latest available data, that is, September 2021. In September, the annual rate of change registered by the Maltese HICP All-items Index was 0.7 per cent, 2.7 percentage points lower than the 3.4 per cent registered for the euro area (Chart 3). The annual rate of change for the Maltese All-items HICP excluding energy and unprocessed food was 0.3 per cent, 1.6 percentage points lower than the 1.9 per cent registered for the euro area (Chart 4).

Chart 3. All-items HICP in Malta and the euro area

5. Background notes

5.1 Accessing data

HICP and RPI NSO news releases may be accessed from:

https://nso.gov.mt/en/News_Releases/View_by_Unit/Unit_A5/Price_Statistics/Pages/Harmonised-Index-of-Consumer-Prices.aspx and

https://nso.gov.mt/en/News_Releases/View_by_Unit/Unit_A5/Price_Statistics/Pages/Retail-Price-Index.aspx respectively.

Eurostat news releases on HICP may be accessed from:

<https://ec.europa.eu/eurostat/web/main/news/euro-indicators>

5.2 Differences between HICP and RPI

Both indices are compiled using a large and representative selection of more than 440 different goods and services for which price movements are regularly monitored. Around 10,000 separate price quotations are used each month to compile the Index.

The methodology underlying HICP and RPI is similar, yet they differ by the following:

- i. The RPI captures private households only, whereas the HICP covers private households, institutional households (such as retirement homes) and foreign visitors to Malta.
- ii. The population base year of the two indices is different. The RPI is a fixed base index with weights periodically updated in line with the Household Budgetary Survey. On the other hand, the HICP is a chain-linked index with the weights reviewed on an annual basis. Unlike the RPI, where the sample of goods and services changes every time the weights are updated, newly significant goods and services can be introduced in the HICP framework on an annual basis.
- iii. The coverage of the HICP is based on an international classification system, COICOP (Classification of Individual Consumption by Purpose), whereas the RPI has a different set of codes for each group of items, as explained in the table below.

Group	COICOP division	Weight (out of 1000)	RPI group	Weight (out of 100)
1	Food and non-alcoholic beverages	181.13	Food (including restaurant services and take-aways)	21.49
2	Alcoholic beverages and tobacco	40.15	Beverages and tobacco	5.56
3	Clothing and footwear	42.97	Clothing and footwear	6.62
4	Housing, water, electricity, gas and other fuels	102.38	Housing	7.90
5	Furniture, household equipment and routine household maintenance	88.15	Water, electricity, gas and fuels	3.31
6	Health	48.06	Household equipment and house maintenance costs	6.97
7	Transport	123.56	Transport and communication	22.10
8	Communication	38.97	Personal care and health	8.81
9	Recreation and culture	77.84	Recreation and culture (including education)	9.90
10	Education	27.23	Other goods and services	7.34
11	Restaurants and hotels	144.52		
12	Miscellaneous goods and services	85.03		
	Total	1,000.00	Total	100.00

Apart from the disparities identified above, both the RPI and the HICP:

- have the same geographic coverage, implying that both indices refer to the whole country;
- utilise the same price collection methodologies; and,
- utilise the same outlet sample (with some exceptions).

5.3 Explaining Divergences between HICP and RPI Inflation

The HICP and RPI price indices bear several similarities and often produce similar inflation estimates. However, in some cases, inherent methodological differences between the two indices, particularly differences in the consumption basket and in the weights given to these products, cause the inflation rates reported by these two measures to diverge. An example of this has been witnessed in recent months. Since April 2021, inflation rates reported by the RPI have been somewhat higher than those suggested by the HICP. This divergence is largely explained by the different weights of the two indices. In line with their respective methodology, in 2021, the RPI maintained the same weights as in the previous year, while the HICP weights were updated to reflect changes in consumption patterns, particularly those brought about by the pandemic.

5.4 Further information

The HICP is used to compare inflation rates across the EU. It has been used by the European Central Bank (ECB) as the measure of price stability across the euro area since January 1999. Indeed, the HICP was developed in the EU for the purpose of assessing whether prospective members of the European Monetary Union would meet the inflation convergence criterion, and later acting as the measure of inflation used by the ECB to assess price stability in the euro area. The main requirement was for a measure that could be used to make reliable comparisons of inflation rates across EU Member States. Such comparisons are not possible using national consumer price indices due to differences in index coverage and construction.

The HICP is published with 2015 as its base year. The previous series with reference 2005=100 has been discontinued. Commission Regulation (EU) No 2015/2010 provides the legal basis for updating the HICP reference year from 2005=100 to 2015=100. It should be noted that the re-basing operation was conducted after rounding all past indices to one decimal place. Therefore, there might be slight differences when comparing this series with past data due to rounding.

The HICP largely follows National Accounts (NA) concepts of what constitutes household consumption in determining the index scope and mainly uses NA data sources to weight the items in the basket. This makes for increased coherence between the HICP commodity and population coverage and NA principles. As a result, HICP weights are based on the final consumption expenditure of all individuals in the domestic territory, including spending by private households, institutional households and foreign visitors. NA principles have also influenced the classification of goods and services within this index. The basket of consumption items considered for the HICP is reviewed annually in line with NA data collected over a 12-month period in order to obtain an estimate of the average household expenditure. New products are included in the basket of items when achieving a sales volume of over one part per thousand of total consumer expenditure covered by the HICP.

The HICP weighting scheme is annually updated in accordance with Commission Regulation (EU) No 1114/2010. The treatment of seasonal items is in accordance with Commission Regulation (EC) No 330/2009.

The HICP Flash Estimates started being compiled and transmitted to Eurostat on a monthly basis as from January 2017. These refer to tentative HICP indices and are used to provide an insight to users about the annual rates of special aggregates as determined by Eurostat. Eurostat collects data from all European Member States and compiles annual rates of special aggregates for the entire euro area.

Users are advised to consult the NSO before comparing the results of the HICP and the RPI.

The euro area mentioned in Section 4 refers to the 19 Member States that adopted Euro as their national currency.

5.5 Publication policy

A calendar for future news releases may be accessed through the link:

https://nso.gov.mt/en/News_Releases/Release_Calendar/Pages/News-Release-Calendar.aspx

6. Methodological notes

6.1 The compilation of the HICP in the context of COVID-19

In the past months, as a result of developments related to COVID-19, the NSO has adapted its methodology to preserve continuity and ensure that developments in prices continue to be measured systematically and reliably. In doing so, NSO has closely followed the guidance issued by Eurostat following close collaboration with the Member States' National Statistical Institutes, which ensures a harmonised approach across all countries.

Further details are available in past news releases and from Eurostat's methodological notes, which are available at: https://ec.europa.eu/eurostat/documents/10186/10693286/HICP_guidance.pdf and https://ec.europa.eu/eurostat/documents/10186/10693286/HICP_lifting_lockdown_measures_guidance.pdf

Data collection

Price collection takes place over at least one working week around the middle of the calendar month to which the index refers. For the reference month of April 2021, whenever the restrictive measures in place inhibited field price collection, alternative sources and methods such as websites, email exchanges and telephone interviews, were undertaken. In situations where the product was not available on the market, the price was imputed. However, the usual coverage of price readings was generally maintained.

Since many restrictive measures in Malta have been lifted, for the reference months of May 2021 onwards, the usual coverage of price readings was possible.

Weights

As a result of the pandemic, consumer spending patterns have changed. To capture this, the HICP weights for 2021 were compiled using preliminary quarterly consumer expenditure data for 2020 from the national accounts, complemented with additional data for 2020 from other sources, such as short-term statistics on retail trade and services. This is in line with Eurostat's recommendations, which are available at:

<https://ec.europa.eu/eurostat/documents/10186/10693286/Guidance-on-the-compilation-of-HICP-weights-in-case-of-large-changes-in-consumer-expenditures.pdf>

The HICP weights for 2021 show that, compared to the previous year, the divisions to witness the highest increase in weight in absolute terms were Food and non-alcoholic beverages and Housing, water, electricity, gas and other fuels, while Restaurants and hotels and Recreation and culture registered the largest decline in weight.

6.2 Reassessments / revisions

The HICP series is published with base year 2015 according to the latest Eurostat base year revisions as explained in the document which can be accessed through the following link:

<https://ec.europa.eu/eurostat/documents/272892/10977288/HICP+reference+year+2015%3D100/>

Note that the RPI series is published in accordance to the reference base December 2016.

6.3 Time series

Data from 1996 onwards is accessible through the following link:

http://appsso.eurostat.ec.europa.eu/nui/show.do?dataset=prc_hicp_midx&lang=en
