Definitions and Methodological Notes		69

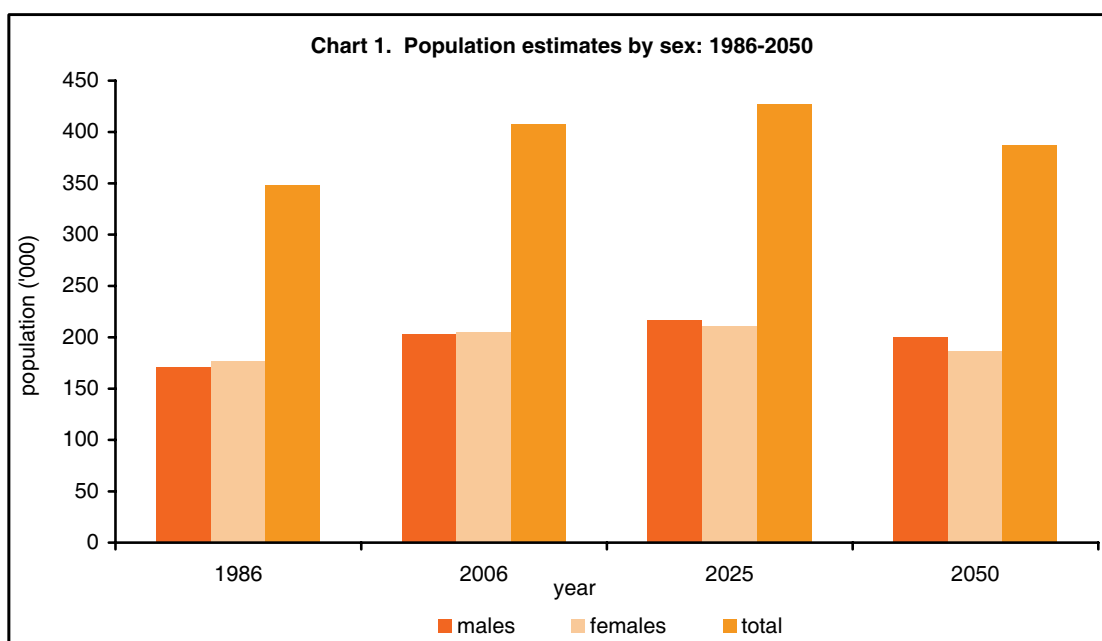

Population Growth

The total population of Malta at the end of 2006, as estimated on the basis of figures produced from the 2005 Population and Housing census, amounted to 407,810 persons. 50.3 per cent of these persons were women. The Maltese population in 2006 was estimated at 393,933 persons, implying that 3.4 per cent of the total population in Malta was composed of foreign citizens.

The total population increase over the estimated count at the end of the previous year, amounted to 2,804. The natural increase in 2006, which is the difference between births and deaths, amounted to 669 persons. This figure makes up nearly 24 per cent of the total increase. The rest of the increase is accounted for by net migration.

The resulting population density in Malta amounted to 1291 persons per square kilometer, an increase of 9 persons per square kilometer over the previous year.

Population projections for 2050 show a declining population which is mainly due to a declining natural increase. This is caused by a diminishing birth rate and a simultaneously increasing average life expectancy. As a result, the total population is projected to decrease by more than 5 per cent within the next forty five years. Moreover, by 2050 the population aged 0 to 14 years is expected to decrease by 32 per cent, whilst that in the 15 - 64 year old age group by 16 per cent. On the other hand, the population aged 65 years and over is expected to increase by 81 per cent.

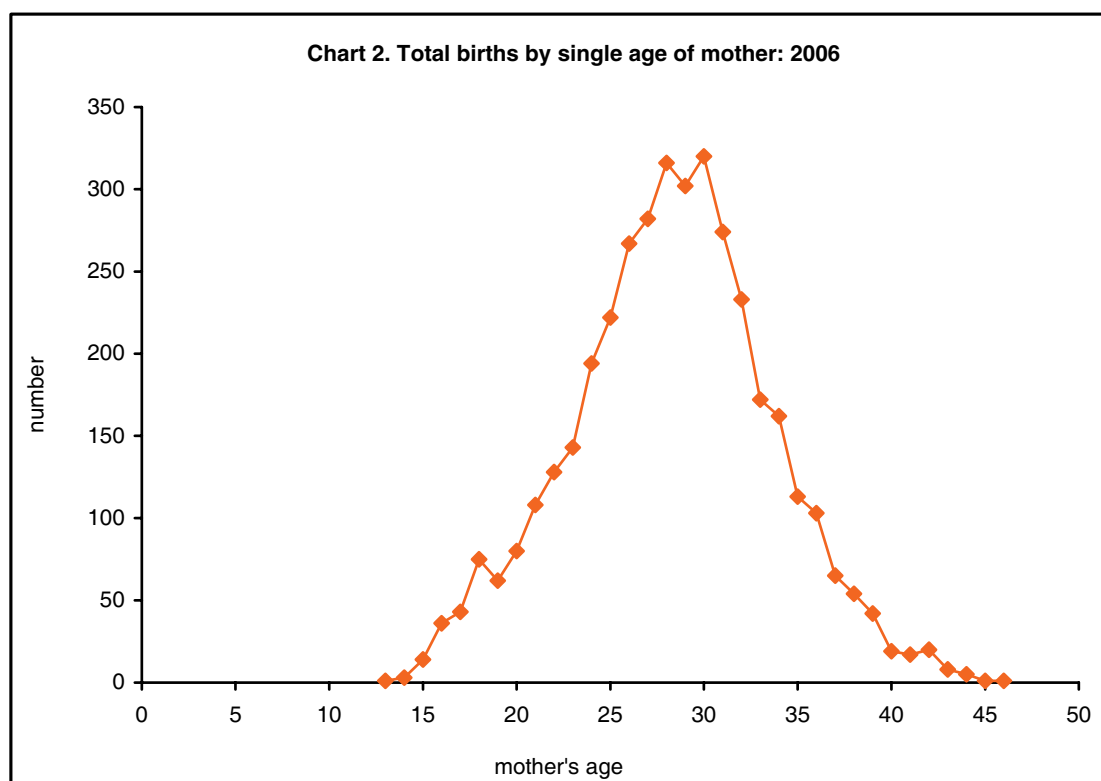

Revised calculations of the life expectancy at birth for this year have shown a slight decrease for both sexes with respect to the previous years and stood at 77 years for men and 81 for women. This may be justified by a slight increase in deaths that has been registered during the year under review. In fact, the total number of registered deaths has been the highest recorded in the last ten years.

Fertility

The total fertility rate increased from 1.37 to 1.41 during the year under review. Nevertheless the total number of births decreased by nearly 1,000 throughout the last decade - a decrease of 20 per cent. The total number of registered births to Maltese and foreign residents in Malta

stood at 3,885, of which 52.5 per cent were boys. The crude birth rate did not vary greatly from that calculated during 2005 and stood at 9.56.

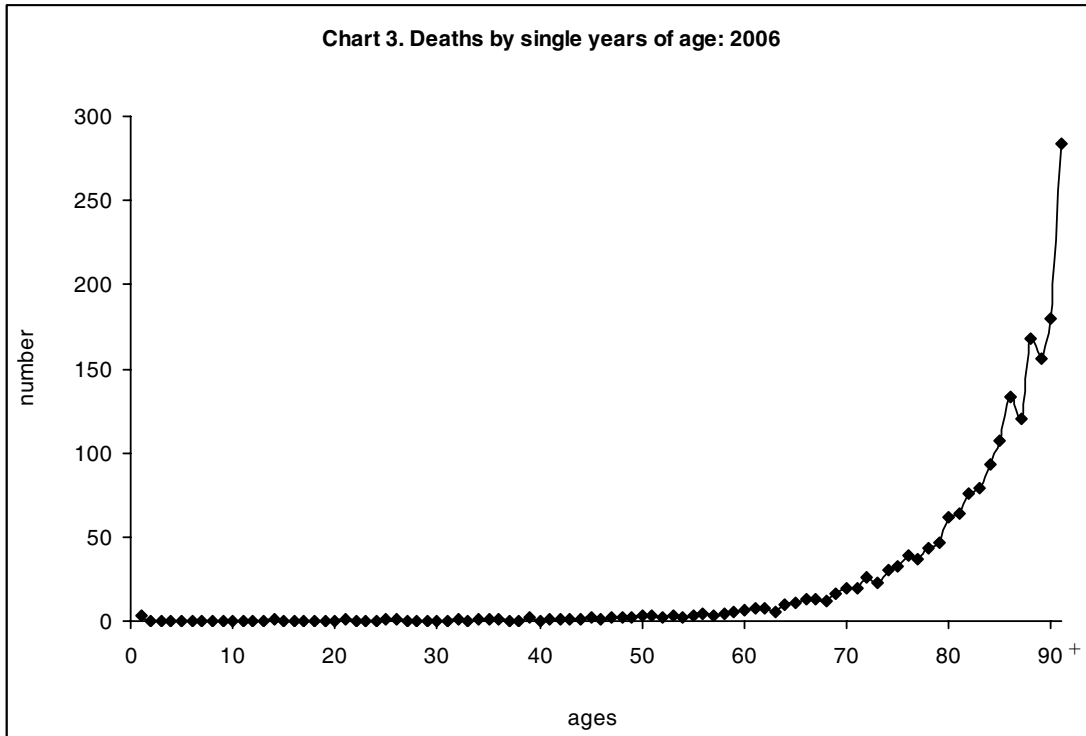

Out of 3,827 maternities registered in 2006, there were 62 pairs of twins and 3 sets of triplets. More than 52 per cent of the mothers were expecting their first child, whilst 24 mothers with five or more children were expecting another child. Nine of these mothers were within the 25-34 year old category.

Maternity records reveal an increasing trend of new mothers within the 20-29 year old category. On the other hand, mothers within the 35-49 year old category are on the decrease.

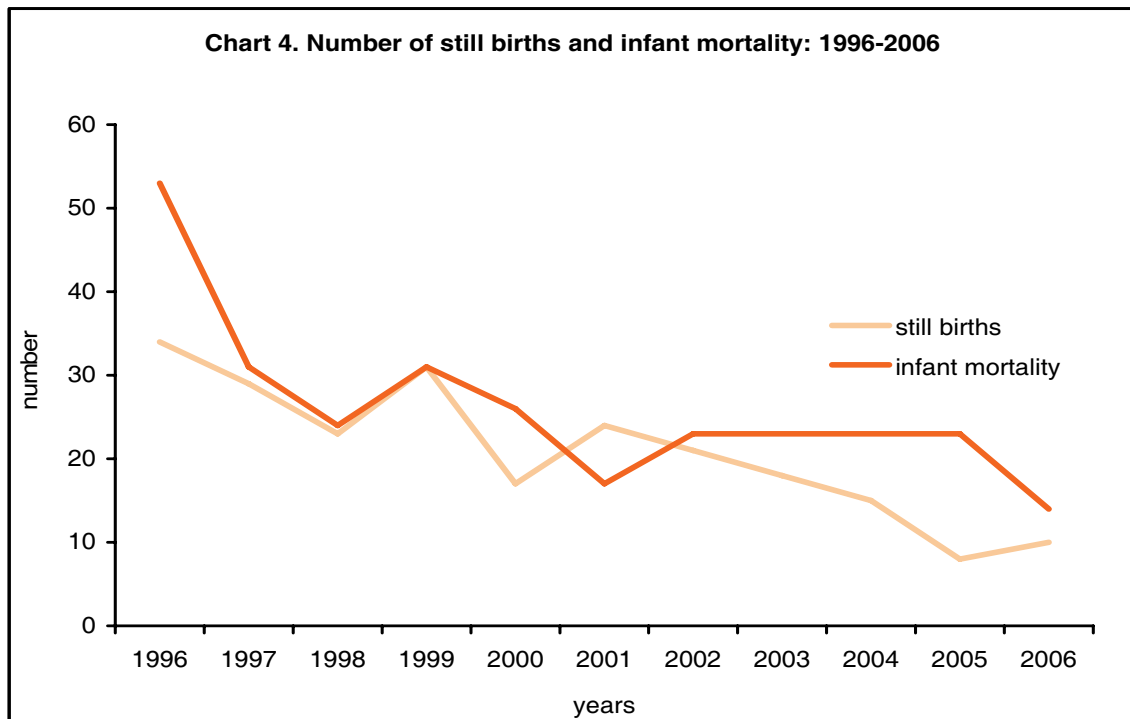

The increase in young mothers is linked to an increase in the number of births outside wedlock, which made up 22.3 per cent of total live births that were registered during 2006. Nearly 92 per cent of mothers under 20 years of age were unmarried mothers.

Mortality

The number of deaths registered during 2006 was 3,216 of which 51.8 per cent occurred amongst men. This is the highest registration of deaths in the past decade. In fact, the number of deaths during 2006 increased by 2.7 per cent with respect to 2005.

The number of stillbirths registered in 2006 increased by 2 and totalled 10 for the year under review. However stillbirths decreased by 65.6 per cent since 1997. A sharp decrease of 47 per cent was registered in the number of neonatal deaths over the past year. In the year under review there were 9 neonatal deaths. Infant mortality (deaths under 1 year) also registered a sharp decrease of 39.1 per cent over last year and numbered 14.

Overall there was a decrease in deaths of persons aged between 0 to 14 years and persons aged between 65 to 74 years. On the other hand, there was an increase in deaths of persons between 15 to 64 years and those aged 75 years and over.

The highest amount of deaths was registered in the winter season. Diseases of the circulatory system are still the most common cause of death – 42.6 per cent, followed by cancerous diseases with 24.8 per cent of total deaths.

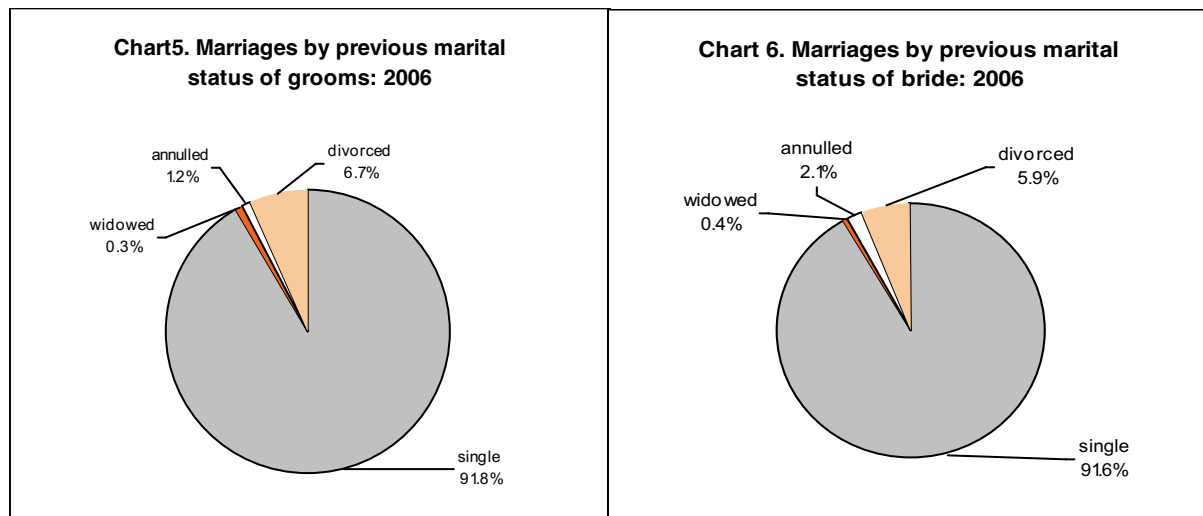

Marriages

In 2006 there were 2,536 registered marriages, which is the highest recorded since 2000. These involve marriages between both foreign and Maltese citizens. The crude marriage rate stood as 6.25. The month of June remains the most popular month in which to celebrate weddings with 15.3 per cent of total marriages in 2006 taking place in June.

Nearly 92 per cent of the spouses were single and the majority aged between 25 to 29 years. Furthermore, 87 per cent of the marriages were between single spouses.

Sixty-four per cent of total marriages in 2006 were between Maltese spouses whilst 16 per cent of marriages were between British spouses.

Nearly 34 per cent of total marriages were civil marriages – an increase of 1.1 per cent over the number registered during last year. Almost 45 per cent of the civil marriages were between British spouses. Slightly over 11 per cent of total civil marriages were between Maltese spouses. These amounted to 6 per cent of total marriages between Maltese spouses.

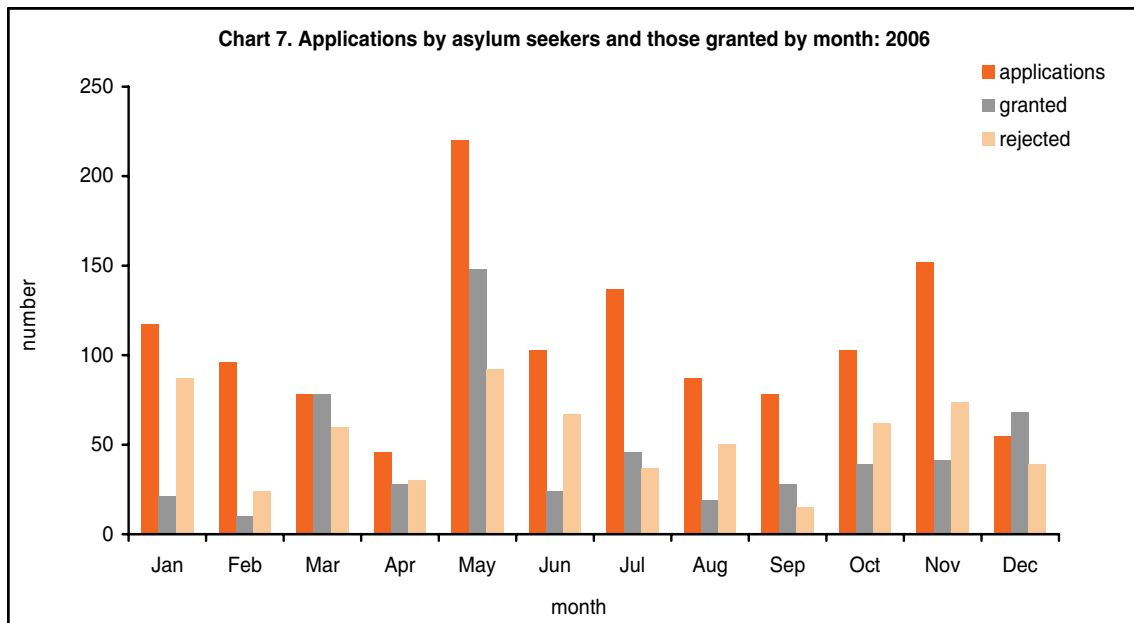

Adoptions

During 2006, 77 children were adopted, of which 57.1 per cent were boys. This was the highest number of adoptions registered during the last 7 years. Nearly 38 per cent of the adoptions in 2006 were from Russia, whilst another 27 per cent were Ethiopians. Seventeen adoptions involved Maltese children. In total, 457 children were adopted since 1999.

Asylum seekers

There were 1,272 applications filed by asylum seekers at the Refugee Commission during 2006. Out of these applications, 28 were granted the Geneva Convention status, whilst 521 were granted a Humanitarian status. Fifty per cent of the applications were rejected. Out of

the total number of applications processed at the Refugee Commission, 14.4 per cent involved unaccompanied minor asylum seekers.

* Basis: End 2006 Estimates of the Total Population (Maltese and Foreign)

- Assumptions:
- Mortality: Death rates for each age group and sex being the average of those recorded during 2003-2006
 - Natality: Average rates specific to age by single years of females between 14-49 recorded during 2003-2006
 - Migration: Average net migration figures by sex recorded during 2003 - 2006.

12. Projected percentage distribution by age and sex of the total population: 2006, 2015, 2035

Age	2006			2015			2035

2,892	4.83	85	4,672	5.90

The column l_x shows, for each sex, the number who would survive to exact age x out of 10,000 born who were subject throughout their lives to the recorded age death rates of the period. Column ${}^o e_x$ is the 'expectation of life', that is the average future lifetime which would be lived by persons aged exactly x , if likewise subject to those death rates.

34. Expectation of life, 1870/72 to 2005 and 2006

Age	Abridged Life Tables at Census Years											Abridged table 2006

Total	1,272	183	28	522	637

Annex

Annex: List of demographic indicators: 2006

Total population (end December)		407,810
	Males	202,613
	Females	205,197
<hr/>		
Maltese population (end December)		393,933
	Males	195,466
	Females	198,467
<hr/>		
Percentage annual population increase		0.69
<hr/>		
Projected total population		('000)
	Year 2015	422.3
	Year 2025	427.2
	Year 2050	386.9
<hr/>		
Number of live births		3,885
	Boys	2,039
	Girls	1,846
<hr/>		
Crude birth rate		9.56
<hr/>		
Number of maternities		3,827
<hr/>		
Total fertility rate		1.41
<hr/>		
Number of deaths		3,216
	Males	1,667
	Females	1,549
<hr/>		
Crude death rate		7.91
<hr/>		
Infant mortality rate		3.6
<hr/>		
Life expectation at age 0	Males	76.8
	Females	81.2
<hr/>		
Number of marriages		2,536
<hr/>		
Crude marriage rate		6.25
<hr/>		

**Definitions
and
Methodological Notes**

Definitions & Methodological Notes

Total Population figures include both Maltese and foreign residents. The total population at the end of year t , is computed using the following equation,

$$P_t = P_{t-1} + B_t - D_t + I_t - E_t, \text{ where}$$

- P_t is the total population at the end of year t ;
- P_{t-1} is the total population at the end of year $t-1$;
- B_t is the total number of births registered during year t ;
- D_t is the total number of deaths registered during year t ;
- I_t is the total immigration of both Maltese and foreign nationals registered during year t . This figure is measured by summing up the count of all new work permit holders together with their dependents, returned migrants and new adoptions of children from foreign countries;
- E_t is the total emigration of both Maltese and foreign nationals registered during year t . This figure is measured by summing up the count of work permit holders who cease to extend their work permit together with their dependents, and other Maltese emigrants.

Maltese population figures include Maltese residents only. The Maltese population at the end of year t , is computed using the following equation,

$$P'_t = P'_{t-1} + B'_t - D'_t + I'_t - E'_t, \text{ where}$$

- P'_t is the Maltese population at the end of year t ;
- P'_{t-1} is the Maltese population at the end of year $t-1$;
- B'_t is the number of Maltese births registered during year t ;
- D'_t is the number of deaths occurring to Maltese citizens during year t ;
- I'_t is the total immigration of Maltese nationals registered during year t . This figure is measured by summing up the count of returned migrants, and new adoptions of children from foreign countries;
- E'_t is the emigration of Maltese citizens registered during year t , together with the count of new registrations.

Some of the **migration** components mentioned above have been quantified through a number of estimates. The estimates have been made using reliable survey data together with benchmarks based on figures produced from the 2005 Population and Housing Census.

Maltese and total **mid-year populations** are calculated by averaging beginning and end-year population estimates.

Population **projections** have been estimated by applying death and fertility rates together with migration figures averaged over the past four years to the total population count as on end of basis year 2006.

Total live births include all births registered in Malta from both Maltese and foreign parents. All still births are excluded. The **crude birth rate** is the number of total live births per thousand mid-year population.

Total fertility rate is the estimated total number of life births occurring to an average woman during her fertility age (14 - 49).

Maternities include both still and live births. Multiple births are counted as one maternity.

Maternity order is the ranking of a newborn baby in relation to all the previous births (both still and live) of the mother; that is, the number of previous births (both still and live) plus the birth that has just occurred.

Still births are deaths occurring to babies prior to the complete expulsion or extraction from its mother of a product of conception, after 22 weeks of gestation or weighing 500 grams and over.

Neonatal deaths are deaths occurring within the first 28 days after birth.

Infant deaths are deaths occurring during the first year of life. Infant mortality rate is the number of infant deaths per 1,000 live births.

Total deaths include all registered Maltese and foreign deaths in Malta and Gozo. This count excludes tourists but includes Maltese dying abroad and who are then buried in Malta. Total deaths exclude still births. The **crude death rate** is the total number of deaths per thousand mid-year total population.

Life expectancy at birth is the number of years a newborn is expected to live if mortality in the various age-groups remains at the level of the period in which the expectation of life is computed.

Total marriages include all marriages registered in Malta and Gozo. This count includes marriages between non-resident foreign spouses as well. The **crude marriage rate** relates the number of marriages per 1,000 total mid year population.

Civil marriages include all non-religious marriages that are recognized by law in Malta

Annulled marriages refer to the all annulments given by the Supreme Courts of the Church Tribunal.

Divorce refers to divorces which were accepted by the laws of Malta in terms of section 33 of the Marriage act, 1975.

Emigration is the action by which a natural person leaves his or her usual residence in the territory of the Member State for a period that is or is expected to last a minimum of 12 months.

Immigration is the action by which a natural person establishes his or her usual residence in a territory of a State for a period that is or is expected to last a minimum of 12 months.

Registration is the action by which foreign residents register themselves as Maltese citizens at the Expatriates and Citizenship Division. Registered persons are included in the Maltese population count.

Asylum Statistics:

- A third country national or stateless person is granted the **Geneva Convention status** (also referred to as Refugee status) if, owing to a well founded fear of being prosecuted for reasons of race, religion, nationality, political opinion or membership of a particular social group, is outside the country of nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country;
- Person eligible for **subsidiary protection** means a third country national or stateless person who does not qualify as a refugee but in respect of whom substantial grounds have been shown for believing that the person concerned, if returned to the country of former habitual residence, would face a real risk of suffering serious harm, or owing to such risk is unable to avail himself or herself of the protection of that country.

Coding:

- Occupations are coded according to the International Standard Classification of Occupations (ISCO);
- Deaths by causes are classified according to the International Classification of Diseases (ICD);
- Localities are classified into districts according to the Malta Geographical Codes (MGC) as follows:
 - **Southern Harbour** - Żabbar, Xgħajra, Valletta, Tarxien, Santa Lucija, Paola, Marsa, Luqa, Kalkara, Senglea, Floriana, Fgura, Cospicua, Vittoriosa.
 - **Northern Harbour** - Ta' Xbiex, Swieqi, Sliema, Santa Venera, San Gwann, St. Julians, Qormi, Pieta', Pembroke, Msida, Ħamrun, Gżira, Birkirkara.
 - **South Eastern** - Żurrieq, Żejtun, Safi, Qrendi, Mqabba, Marsaxlokk, Marsaskala, Kirkop, Gudja, Għaxaq, Birżebbuġia.
 - **Western** - Żebbuġ (Malta), Siġġiewi, Rabat (Malta), Mtarfa, Mdina, Lija, Iklin, Dingli, Balzan, Attard.
 - **Northern** - St. Paul's Bay, Naxxar, Mosta, Mgarr, Mellieħa, Għargħur.
 - **Gozo and Comino** - Rabat (Gozo), Fontana, Għajnsielem and Comino, Għarb, Għasri, Kerċem, Munxar, Nadur, Qala, San Lawrenz, Sannat, Xagħra, Xewkija, Żebbuġ (Gozo).

Other notes:

- As from 2003, there has been a change in the method in which birth and death statistics are compiled. Prior to 2003, figures on births and deaths referred to Maltese persons only. In 2003 definitions were changed to include total births and deaths. Past data has been revised to reflect the new definitions and to ensure that the time series are consistent. In the case of annual deaths data classified by ICD Chapters of causes, revisions were not necessary since these figures have always referred to the total number of deaths;
- The total maternities by age of mother in tables 16 and 17 are not comparable because the data has been extracted from different registers which might have some minor inconsistencies.
