

# Annual Non-financial Accounts of the Household Sector: 2025

- News
- Analysis
- Data
- Methodology

## Salient Points

- Households’ gross disposable income per capita increased by 4.2 per cent in 2025, while real gross disposable income per capita rose by 4.5 per cent.
- Households’ final consumption expenditure increased by 5.2 per cent in nominal terms and 5.5 per cent in real terms, while real consumption expenditure per capita grew by 3.2 per cent.
- Gross households’ savings reached €2.5 billion in 2025, raising the gross households’ saving rate to 19.2 per cent of gross disposable income, up by 1.0 percentage point over 2024.
- Households recorded net lending of €2.1 billion in 2025, compared with €1.8 billion in the previous year.

## Commentary

The GDP estimates have been revised in line with the regular revision cycle, mainly reflecting the integration of the 2021 and 2022 Supply and Use Tables, partial results from the 2024 Structural Business Statistics survey, updated administrative data, recommendations from GNI and EDP verification processes, and an enhanced FISIM deflator methodology. More information available in the [press information notice](#) published on 17 August 2026.

*Provisional estimates indicate that real households’ gross disposable income per capita increased by 4.5 per cent in 2025, while real households’ final consumption expenditure per capita rose by 3.2 per cent. Gross households’ saving reached €2.5 billion, equivalent to 19.2 per cent of gross disposable income, and households’ net lending increased to €2.1 billion.*

### Households’ disposable Income, consumption and savings

Households’ gross disposable income per capita at current prices increased by 4.2 per cent in 2025, compared with 11.6 per cent in 2024. Real households’ gross disposable income per capita, which excludes the impact of inflation, increased by 4.5 per cent in 2025 compared with 7.9 per cent in 2024. Real households’ adjusted gross disposable income per capita, which includes individual goods and services received free of charge from government and Non-Profit Institutions Serving Households (NPISH), referred to as social transfers in kind, increased by 4.4 per cent in 2025, compared with 8.0 per cent in 2024 (Table 5).

Households’ final consumption expenditure in 2025 was estimated at €10,695 million, representing an increase of 5.2 per cent in nominal terms (Table 1) and 5.5 per cent in real terms, compared with increases of 9.2 per cent and 5.6 per cent, respectively, in 2024. The slower growth in nominal households’ consumption expenditure partly reflects developments in Financial Intermediation Services Indirectly Measured (FISIM). Compared to 2024, the value of FISIM allocated to households declined by €231 million, reducing the level and growth of households’ final consumption expenditure. As FISIM is reflected in both households’ income and households’ final consumption expenditure, the corresponding effects offset each other, resulting in a neutral impact on household saving. On a per capita basis, households’ final consumption expenditure increased by 2.9 per cent in nominal terms and by 3.2 per cent in real terms (Table 5).

Chart 1 compares the annual growth rates of gross disposable income per capita, adjusted gross disposable income per capita, and final consumption expenditure per capita in real terms. In 2025, growth in real final consumption expenditure per capita increased, while both income indicators continued to grow at a slower pace, reflecting weaker growth in compensation of employees, net property income, and net social contributions and benefits.

In 2025, gross households’ savings were estimated at €2,542 million (Table 1). The gross households’ saving rate stood at 19.2 per cent of gross disposable income, 1.0 percentage point higher than the rate recorded in the previous year (Table 5). The increase in savings reflected the stronger growth in gross disposable income (6.4 per cent) relative to the households’ final consumption expenditure (5.2 per cent) (Table 1).

Household investment reached €976 million in 2025, compared with €918 million in the previous year (Table 1). The household investment rate remained broadly stable at 7.4 per cent of gross disposable income, edging down slightly from 2024 (Table 5).

After accounting for the balance of capital transfers, households recorded a net lending of €2,143 million up from €1,771 million in 2024 (Table 1).

Note - 32 In the case of unincorporated enterprises in the households sector, the balancing item of the generation of income account implicitly contains an element corresponding to remuneration for work carried out by the owner or members of the family. This income from self-employment has characteristics of wages and salaries, and characteristics of profit due to work carried out as an entrepreneur. This income, neither strictly wages nor profits alone, is referred to as 'mixed income'. In the case of own account production of housing services by owner-occupier households, the balancing item of the generation of income account is operating surplus (and not mixed income).

Note - 33 Entrepreneurial income, gross is only compiled for S.11 and S.12.

Table 1. Households (S14)

Note - 32

In the case of unincorporated enterprises in the households sector, the balancing item of the generation of income account implicitly contains an element corresponding to remuneration for work carried out by the owner or members of the family. This income from self-employment has characteristics of wages and salaries, and characteristics of profit due to work carried out as an entrepreneur. This income, neither strictly wages nor profits alone, is referred to as 'mixed income'. In the case of own account production of housing services by owner-occupier households, the balancing item of the generation of income account is operating surplus (and not mixed income).

Note - 33

Entrepreneurial income, gross is only compiled for S.11 and S.12.

Table 1. Households (S14)

Note - 32 In the case of unincorporated enterprises in the households sector, the balancing item of the generation of income account implicitly contains an element corresponding to remuneration for work carried out by the owner or members of the family. This income from self-employment has characteristics of wages and salaries, and characteristics of profit due to work carried out as an entrepreneur. This income, neither strictly wages nor profits alone, is referred to as 'mixed income'. In the case of own account production of housing services by owner-occupier households, the balancing item of the generation of income account is operating surplus (and not mixed income).

Note - 33 Entrepreneurial income, gross is only compiled for S.11 and S.12.

**Table 2. Gross operating surplus (B2g) plus gross mixed income (B3g) of the household sector by industry**

# Methodological Notes

1. The objective of the annual non-financial accounts for the institutional sectors (ASA) is to analyse the economic relationships between the institutional units that form the national economy (non-financial corporations (S.11), financial corporations (S.12), general government (S.13), households (S.14) and non-profit institutions serving households (S.15)) and between them and the rest of the world in an ordered series of accounts that describe each phase of economic process (production and creation of income, distribution and redistribution, final consumption, savings and asset accumulation). These results are prepared in compliance with the conceptual and regulatory framework established by the European System of National and Regional Accounts (ESA 2010), approved by the [Regulation \(EU\) 549/2013](#), of the European Parliament and of the Council, of 21 May. More information on the sequence of non-financial account is available in ESA 2010, [Chapter 8](#).

2. S.14 consists of individuals or groups of individuals mainly engaged in consumption activities, including those producing goods and non-financial services solely for their own final use. Own final use relates to services of owner-occupied dwellings, and domestic services produced by payable employees. The household sector also covers sole proprietorships and unincorporated partnerships that are market producers, except those treated as quasi-corporations.

3. In February 2025, the National Statistics Office (NSO), published the [Non-financial Annual Sector Accounts \(ASA\) Inventory](#). It aims to provide a comprehensive overview of the national compilation procedures of annual non-financial accounts by institutional sector according to ESA 2010. An updated version as at October 2026 is now available.

4. The results are disseminated [online](#) 90 days following the end of the reference year (t+90 days, t being the reference year). These results are consistent with the quarterly non-financial accounts for the institutional sectors compiled at t+85 following the end of the reference year (t being the reference quarter). In the case of Malta, quarterly non-financial accounts are only compiled for S.1, S.2 and S.13. The rest of the sectors are voluntary for countries whose GDP at current prices represents less than 1 per cent of the corresponding union total. The 1 per cent threshold is calculated as a moving average based on the latest three available years. The quarterly non-financial accounts for the institutional sectors dataset is available [online](#). This calendar is compatible with the requirements for availability of national accounts results established by Regulation (EU) 549/2013 on the European System of National and Regional Accounts 2010.

5. Data in this news release are consistent with the [Gross Domestic Product: Q2/2026](#) news release published on 27 August 2026 and [Annual Non-Financial Accounts by Institutional Sectors: 2021-2025](#) news release published on 22 October 2026. Data should be considered provisional from 2023 onwards.

6. Compared to the previous release which covered reference years 1995 to 2024, the following enhancements have been done:

- Change in the methodology applied to transfers into and out of pension funds. “Transfers in” are recorded as D.61 (D.75 in the case of non-resident clients), while “transfers out” are now recorded as D.62 (D.75 in the case of non-resident clients). The treatment is neutral in the non-financial accounts (B.9 = 0), as transactions recorded under D.61 uses are offset by corresponding transactions under D.8 resources. The methodology has been further refined to incorporate the recording of transfers out under D.62 and D.75 for resident and non-resident clients, respectively. Reference years 2012–2020 will be updated as part of the next benchmark revision.

- Inclusion of intra-household transfers under other current transfers (D.75), using EU-SILC data, from reference year 2021 onwards. This treatment increases the level of D.75 transactions but is neutral with respect to gross saving and net lending/net borrowing. Reference years 1995–2020 will be updated as part of the next benchmark revision.

7. A more detailed breakdown of annual non-financial accounts by the institutional sectors and by variable are available [online](#).

8. Calculations are performed using the full underlying values prior to rounding. Figures presented in this news release are rounded for publication purposes. Consequently, calculations based on the published figures may differ slightly from the reported results. Any such differences are attributable solely to rounding and do not represent inconsistencies in the underlying data or calculations.
