Index of Industrial Production (IIP): September 2026

NR 202/2026 | Short-term Business Statistics | Release Date: 06/11/2026 | Cut-off Date: 02/11/2026

News | Data | Methodology

Salient Points

- In September 2026, industrial output increased by 7.1 per cent when compared to September 2025.
- The largest annual upward change in industrial production among selected aggregates was registered in the production of wood, paper products, and printing (27.1 per cent).
- When compared to the corresponding month of 2025, the highest increase in production among the main industrial groupings occurred in energy (16.6 per cent).
- The total industrial production went up by 2.3 per cent when compared to August 2026.

Commentary

In September 2026, the total industrial production index registered an increase of 7.1 per cent when compared to the corresponding month of 2025.

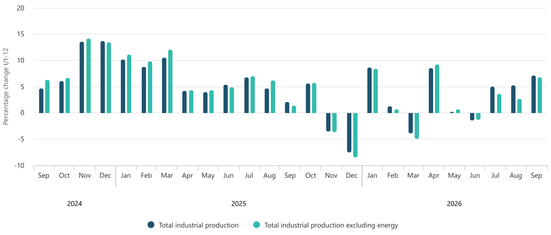

The monthly Index of Industrial Production (IIP) is a business cycle indicator. It provides an early measure of changes in the volume of industrial output produced by domestic businesses in the manufacturing, energy, and quarrying sectors in Malta.

Total industrial output – annual comparison

In September 2026, the index of industrial production increased by 7.1 per cent when compared to September 2025. When excluding energy, the index went up by 6.7 per cent (Table 1 and Chart 1).

Chart 1. Annual comparison of the total industrial production

% change compared to the corresponding month of the previous year

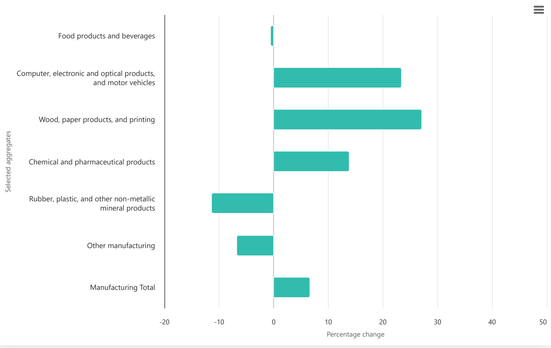

Manufacturing output – annual comparison by selected aggregates

In September 2026, manufacturing output increased by 6.6 per cent. The largest upward change was registered in the production of wood, paper products, and printing (27.1 per cent), followed by computer, electronic and optical products, and motor vehicles (23.4 per cent), and chemical and pharmaceutical products (13.8 per cent). On the other hand, decreases were recorded in the production of rubber, plastic, and other non-metallic mineral products (11.4 per cent), other manufacturing (6.8 per cent), and food products and beverages (0.6 per cent) (Chart 2).

Chart 2. Manufacturing output – annual comparison by selected aggregates

% change compared to the corresponding month of the previous year

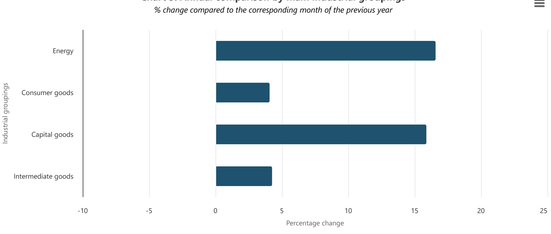

Industrial output – annual comparison by main industrial groupings

The Main Industrial Groupings (MIGs) provide an alternative statistical breakdown of economic activities classified according to end-use categories. They combine several NACE divisions, groups and classes together (see methodological table for further information).

In September 2026, increases in production were recorded across all main industrial groupings. The highest increase was registered in energy (16.6 per cent), followed by capital goods (15.9 per cent), intermediate goods (4.3 per cent), and consumer goods (4.1 per cent) (Chart 3).

Chart 3. Annual comparison by main industrial groupings

% change compared to the corresponding month of the previous year

Seasonally adjusted industrial production – monthly comparison

A clearer picture of the economic developments can be obtained when indices are adjusted for seasonal effects. These recurring effects are removed from the index series to enable month-to-month comparisons (see methodological points 5 and 6).

The seasonally adjusted index of industrial production for September 2026 went up by 2.3 per cent when compared to August 2026 and stood at 123.8 index points (2021=100) (Table 3 and Chart 4).

Chart 4. Seasonally adjusted index of industrial production

Index (2021 = 100)

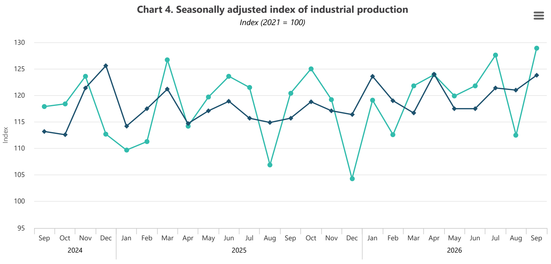

Table 1. Industrial production indices and annual percentage changes (calendar adjusted)

(index 2021=100)

Month	Total industrial production index	Annual % changes	Total industrial production excluding energy	Annual % changes
	2025			
September	120.4	2.1	121.4	1.4
October	125.0	5.6	127.0	5.7
November	119.2	-3.6	121.2	-3.7
December	104.3	-7.5	104.6	-8.5
	2026			
January	119.1	8.6	120.4	8.4
February	112.6	1.2	113.9	0.7
March	121.8	-3.9	124.2	-5.0
April	123.9	8.5	127.7	9.2
May	119.9	0.2	123.3	0.7
June	121.8	-1.5	123.2	-1.3
July	127.6	5.0	125.8	3.6
August	112.5	5.2	109.2	2.7
September	128.9	7.1	129.5	6.7

Table 2. Calendar adjusted indices for industrial production by period

(index 2021=100)

Period	Total industry (NACE Sections B to D)	Total industry excluding energy index (NACE Sections B & C)	Total manufacturing (NACE Section C)	Energy (NACE Section D)	Capital goods	Consumer goods	Consumer durable goods	Consumer non-durable goods	Intermediate goods

Methodological Notes

1. The Index of Industrial Production is a Principal European Economic Indicator (PEEI) and is compiled in accordance with Commission Regulation (EU) 2019/2152 and Commission Implementing Regulation 2020/1197 of the European Parliament and of the Council on European Business Statistics. The NSO has also adopted methodologies and guidelines recommended by Eurostat and the United Nations.

2. The Maltese Index of Industrial Production is calculated using a Laspeyres-type index (2021=100). Aggregation weights are updated every five years and the gross value added is used as the weighting variable. The whole series is available from the year 2000 onwards.

3. The sample covers 80 per cent of the total industrial turnover, and around 200 business units are surveyed. A combination of cut-off and stratified random sampling techniques is used. The volume of industrial production is calculated using three methods: physical quantities of output, deflated turnover, and number of hours worked.

4. In this news release, Energy refers only to NACE D35 – Electricity, gas, steam, and air conditioning supply. It excludes B05 – Mining of coal and lignite; B06 – Extraction of crude petroleum and natural gas; C19 – Manufacture of coke and refined petroleum products; and E36 – Water collection, treatment, and supply. The index also excludes electricity supplied via the Malta-Sicily Interconnector.

5. Year-on-year comparisons refer to indices that are calendar adjusted, while month-on-month comparisons refer to calendar and seasonally adjusted indices. These adjustments aid the interpretation of data by removing regularly recurring variations from a time series. The officially recommended software JDemetra+ is used to adjust all series in this news release.

6. The calendar effect is the variation caused by the changing number of working/trading days, fixed and moving holidays, leap year and other calendar-related phenomena. The seasonal effect is the variation caused by any pattern that repeats on a regular basis in the same period each year.

7. The average weighted response rate for this indicator is around 80 per cent. The data is to be considered as provisional and therefore subject to revision.

8. The aggregation weights (gross value added) of the various categories used for the calculation of the Index of Industrial Production for the year 2021 (base year) are as follows:

NACE Section	NACE Divisions	Description
B	8	Mining and Quarrying
C	13, 14, 25, 27, 28 and 31 to 33	Other manufacturing
	10 and 11	Food products and beverages
	26 and 29	Computer, electronic and optical products, and motor vehicles
	22 to 23	Rubber, plastic, and other non-metallic mineral products
	16 to 18	Wood, paper products, and printing
	20 and 21	Chemical and pharmaceutical products
D	35	Energy
		Total (Sections B, C and D)

Main Industrial Grouping	Description	Example
Capital goods	Capital goods are physical assets used by businesses to produce consumer (final) goods.	Machinery equipment
Intermediate goods	Intermediate goods, also called semi-finished goods, are products used as inputs to produce a consumer (final) good.	Rubber and plastic products
Consumer goods	Consumer goods, also called final goods, are products that are readily available for consumption by consumers. These goods do not undergo further transformation in production.	Food products and beverages
Energy	Energy refers to the production of electricity.	Electricity excluding supply imported via the Malta-Sicily Interconnector

9. The calculation of the percentage changes from the indices table may slightly differ from the published percentage changes due to rounding.
