

News Release

Date: 20 April 2006
 No. : 78/2006
 Time of release: 11.00 hrs

Prices

Harmonised Index of Consumer Prices (HICP): March 2006

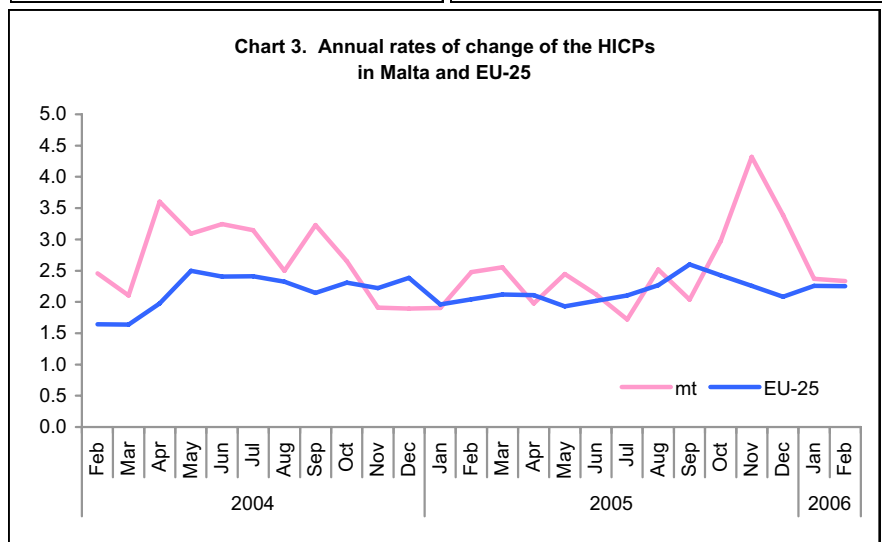

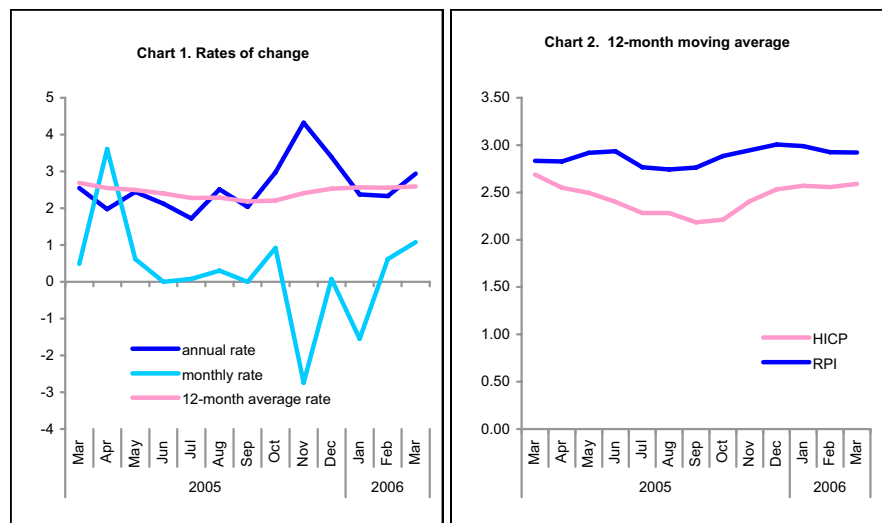

In March 2006, the annual rate of change of the Harmonised Index of Consumer Prices (HICP) stood at 2.9 per cent. A year earlier, the annual rate of change of the HICP was 2.6 per cent.

The HICP increased by 1.1 per cent in March 2006 as compared to February 2006. A year earlier, the rate stood at 0.5 per cent.

In the year to March 2006, the 12-month average rate of the HICP stood at 2.6 per cent. Over the same period, the all items Retail Price Index (RPI) stood at 2.9 per cent.

Explanatory Notes

1. The format of the HICP News Release has been revised in the light of the needs expressed by our users. This new format is expected to be more user friendly apart from furnishing more relevant information. One of the major changes we have implemented is the illustration of tables containing the linked indices instead of the original indices. The former, as the name suggests, preserves the time trend by linking all indices to a common base year. Moreover, this new format contains more graphical illustrations to aid our users in interpreting the time trends.
2. The Harmonised Index of Consumer Prices (HICP) is calculated according to rules specified in a series of European Union Regulations that were developed by the EU statistical office - Eurostat - in conjunction with the EU Member States.
3. The HICP is used to compare inflation rates across the European Union. Since January 1999 the European Central Bank (ECB) has also used it as the measure of price stability across the Euro area. Indeed, the HICP was developed in the EU for the purpose of assessing whether prospective members of European Monetary Union would meet the inflation convergence criterion and then of acting as the measure of inflation used by the European Central Bank to assess price stability in the euro area. The main requirement therefore was for a measure that could be used to make reliable comparisons of inflation rates across EU Member States. Such comparisons are not possible using national consumer price indices due to differences in index coverage and construction.
4. While the methodology of the Retail Prices Index (RPI) and the HICP is similar, it differs in the following ways:
 - (a) The population base of each index is different. The RPI is representative of private households only.

The HICP covers private households, institutional households and foreign visitors to Malta.
 - (b) The RPI is a fixed weights and fixed base index while the HICP is a chain index whose weights are reviewed on an annual basis, in January of each year. In addition to this, newly significant goods and services are introduced into the HICP on an annual basis.
 - (c) The coverage of the HICP is based on an international classifications system, COICOP (classification of individual consumptions by purpose). The way in which this broadly maps to the RPI groupings is shown in the following table:

	COICOP Divisions	RPI Group
01	Food and non-alcoholic beverages	Food (including take-away food and food consumed in restaurants)
02	Alcohol and tobacco	Beverages and tobacco
03	Clothing and footwear	Clothing and footwear
04	Housing and household services	Housing Water, electricity, gas and fuels
05	Furniture and household goods	Household equipment and house maintenance costs
06	Health	Personal care and health
07 08	Transport Communication	Transport and communications
09 10	Recreation and culture Education	Recreation and culture (including education)
11	Restaurants and hotels	Restaurants (included under food)
12	Miscellaneous goods and services*	Other goods and services

This comparison is broad and indicative only. Therefore, users are advised to consult the NSO before comparing the results of these indices at such levels.

5. Apart from the disparities identified in point 3 above, both the RPI and the HICP have the same geographic coverage in that both indices refer to the whole country. In addition to this, both indices utilize the same price collection methodologies in respect of, by and large, the same basket of goods and services. Prices are collected from the same outlets.
6. The RPI and the HICP use different weighting schemes. The RPI weights refer to expenditure by private households and are largely based on data derived from the Household Budgetary Survey. The HICP weights cover private household expenditure, institutional household expenditure as well as tourism expenditure in Malta. The differences in the underlying weighting schemes between the RPI and the HICP account significantly for the disparities in their results on a monthly basis.
7. The types of goods and services that in principle should be included in the index are known as the scope of the price index. The HICP largely follows National Accounts concepts of what constitutes household consumption in determining the index scope and mainly uses National Accounts data sources to weight the items in the basket. This makes for increased coherence between the HICP commodity and population coverage and National Accounts principles. As a result, HICP weights are therefore based on the final consumption expenditures of all individuals in the domestic territory, including spending by private households, institutional households and foreign visitors. National Accounts principles have also influenced the classification of goods and services within this index.
8. Whereas the HICP is subject to revisions, the RPI is, by convention, revised in rare and exceptional circumstances.
9. The HICP is being published with 2005 as its base year. However, as already indicated, the HICP is a chain index that is subject to review on an annual basis. It should be noted that the re-basing operation was conducted after rounding all past indices to 1 decimal place as prescribed by Eurostat. This means that there might be slight differences when comparing this new series with the past due to rounding.
10. The HICP will, henceforth, be published in Malta by the NSO on a monthly basis. Eurostat will also publish it on a monthly basis. However, the latter also publishes aggregate HICP indices for the Monetary Union countries and the European Union. In aggregating the individual country indices, Eurostat uses weights that are based on each country's share of each relative bloc's total household final consumption expenditure.
11. The figures included in this news release might not match exactly the figures published by Eurostat due to rounding.
12. The EU-25 figures are provisional.
