

6 October 2015 | 1100 hrs | 180/2015

In the second quarter, working-day adjusted turnover in selected services activities increased by 6.1 per cent over the corresponding period of 2014. Provisional seasonally adjusted services turnover increased by 4.8 per cent.

Short-term Services Indicators: Q2/2015

Cut-off date:
1 October 2015

Annual comparison

When compared to the second quarter of 2014, working-day adjusted turnover went up by 6.1 per cent. Turnover increased in all sectors, namely professional, scientific and technical activities (29.4 per cent), real estate activities (19.9 per cent), accommodation and food service activities (9.1 per cent), information and communication (7.7 per cent), administrative and support service activities (6.7 per cent), transportation and storage (5.5 per cent), motor trade (4.7 per cent), retail trade (3.2 per cent) and wholesale trade (2.8 per cent) (Table 1).

Employment (Table 3), gross wages and salaries (Table 5) and hours worked (Table 7) increased by 0.8, 3.0 and 1.2 per cent respectively over the comparative quarter of 2014.

Quarterly comparison

When compared to the previous quarter, seasonally adjusted turnover in the second quarter of 2015 increased by 4.8 per cent (Table 2). Increases were registered in information and communication (11.6 per cent), real estate activities (11.1 per cent), wholesale trade (7.5 per cent), professional, scientific and technical activities (7.2 per cent), administrative and support service activities (6.0 per cent), accommodation and food service activities (4.9 per cent), transportation and storage (2.7 per cent) and retail trade (1.6 per cent). A decrease of 3.8 per cent was registered in the motor trade sector.

Seasonally adjusted employment (Table 4), gross wages and salaries (Table 6) and hours worked (Table 8) increased by 0.4, 0.3 and 0.4 per cent respectively over the previous quarter ■

Methodological Notes

1. The aim of short-term statistics is to provide information on the business cycle within the services sector. The results are compiled and published according to the statistical classification of economic activities in the European Community, NACE Rev. 2.
2. Every quarter, questionnaires are sent to approximately 900 enterprises categorised within the services sector. The data is then grossed up to represent the entire Services population. For each NACE division (for example NACE Division 45 for motor trade), a sample was selected. The selected enterprises were requested to provide information, including turnover, employment and wages and salaries, on a quarterly basis. The indices were calculated for each division, showing the level of the specified variable (for example employment) relative to the average level throughout the base year 2010. The index numbers in this release are working-day and seasonally adjusted. These statistical methods aid interpretation of data by removing regularly recurring variations from a time series. Working-day adjustment is a statistical method for removing the calendar effect from an economic time series. The calendar effect is the variation caused by the changing number of working days in different quarters.

The number of working days for a given quarter may depend on the timing of certain public holidays, the possible overlap of certain public holidays and non-working days, and the occurrence of a leap year. This method is used to make a comparison with the corresponding quarter of the previous year. Seasonal adjustment removes variations which include effects due to quarter length, holidays and particular events such as Christmas.

Statistically, seasonal adjustment takes place after a time series has already been cleared of calendar effects by way of working-day adjustment. This method is used to compare data for a specific quarter with the previous quarter. In seasonal and working-day adjustment, the direct approach is used and refers to the adjustments of aggregated raw component.

3. In line with the Regulation on Short-term Statistics, services exclude Financial and Insurance Activities and Gambling and Betting Activities.
4. **Definitions:**
 - **Turnover:** includes total sales and other income and is expressed net of VAT. Turnover is presented in current prices.
 - **Wages and Salaries:** covers wages and salaries including bonuses, weekly allowances (cost of living allowances), overtime and national social security contributions by the employee. The definition does not include employer's social security charges.
 - **Employment:** covers all persons employed, regardless of whether they are part-time or full-time, and includes paid employees as well as working proprietors and unpaid family workers. Employment is not working day adjusted since the number of employees does not depend on factors that make up the working day effect.
 - **Hours worked:** covers total amount of hours actually worked; regular working hours and during overtime; during nights, Sundays or public holidays. Hours worked but not paid are also considered.
5. The data contained in this release should be considered as provisional and therefore subject to revision. Each release may include revisions of the past quarterly data in respect of a rolling two-year period.

A distribution of the aggregation weights by NACE classification is presented in the following table:

NACE	Turnover	Employment	Wages and salaries	Hours worked
